Power listed is EIRP. SAR compliance for body-worn operations is restricted to belt-clips, holsters, or similar accessories that have no metallic component in the assembly and which provide at least 1.5 cm separation between the device and the users body. SAR compliance for specific co-located transmitter conditions was evaluated for near-body operation and held-to-ear configurations as described in this composite filing; other collocated configurations require separate evaluation. End-users must be informed of the body-worn operating requirements for satisfying RF exposure compliance. The highest reported collocated SAR levels are: Part 24(E): Body: 0.49W/kg, Head: 1.08W/kg. This device contains functions that are not operational in U.S. Territories. This filing is only applicable for U.S. operations.
